

TOOL REQUIREMENTS (46)										
INFORMATION TO BE PROVIDED (22)			TOOL USAGE (24)							
DETAILED INFORMATION (13)		GROUPED INFORMATION (9)	TOOL EXECUTION (12)				TOOL INTERFACE (8)	TOOL CUSTOMIZATION (4)		
The dashboard will present a list of smells per type.		The dashboard will present the evolution of metrics provided by linters. The dedicated technical debt dashboard will present the business impact of technical debt. The CI-script will include the amount of code smells in a project into the report. The CI-script will send a report containing the evolution of quality metrics. The code review bot will provide the number of code smells in the files before the PR with a new code patch. The dashboard will present test code coverage combined with the amount of issues containing technical debt The code review bot will provide the long-term impact of code smells in a new code patch The CI-script will send the summary of the data presented report. The refactoring plugin will present the impact of refactoring suggestions on legacy systems.	WORKFLOW EXECUTION (5)	EXECUTION CRITERIA (6)		MANUAL EXECUTION (1) The refactoring plugin will enable manually-trggered execution		The issue labeling bot will send notifications by e-mail	The issue labeling bot will enable practitioners to choose whether to assign a label to an issue	
The dashboard will present a list of issues per reporter.			The refactoring plugin will provide refactoring suggestion at commit time	The issue labeling bot will provide a customization option to configure notifications considering the feature under development.				The issue labeling bot will send notifications by instant messaging services	The code review bot will provide a command for marking code smells as false positives in a new code patch	
The dedicated technical debt dashboard will present a list of technical debt items per type.			The CI-script will send notifications to practitioners after each CI-Cycle.	The issue labeling bot will provide a customization options to configure notifications when a threshold is reached.				The refactoring plugin will present refactoring suggestions within the IDE interface.	The code review bot will provide a command for ignoring warnings about code smells in a new code patch.	
The dashboard will present a list of smells per package			The code review bot will notify the commit author about code smells in a new code patch.	The issue labeling bot will provide a customization option to configure notifications considering the time since an issue was open.				The dashboard will contain a dedicated widget for technical debt	The code review bot will provide a command for ignoring warnings about code smells in a new code patch.	
The issue labeling bot will notify practitioners about issues containing techincal debt.			The code review bot will notify the tech lead/architect about the amount of code smells in a code patch.	The issue labeling bot will provide a customization option to configure notifications considering the label assigned to an issue.				The CI-script will send notifications using instant message services	The dashboard will provide a customization option to select which projects/files to present information about.	
The code review bot will provide the feature or user story number in the report about code smells in a new code patch.			The code review bot will notify the contributors of a certain module about code smells in a new code patch.	The issue labeling bot will provide a customization option to configure notifications considering the label assigned to an issue.				The CI-script will send notifications using mailing lists		
The code review bot will include links to the code smells in a new code patch.				The issue labeling bot will provide a customization option to configure to which practitioners notifications will be sent.				The CI-script will present qaulity metrics using a CI Job Dashboard.		
The CI-script will include the metric that triggered a certain report.				The issue labeling bot will provide a customization option to configure to which practitioners notifications will be sent.				The CI-script will send notifications to practitioners using pull requests messages		
The code review bot will provide additional information that helps fixing the code smells in a new code patch.				The CI-script will send notifications to practitioners based on a threshold.						
The code review bot will provide a warning containing the standards set by the team.										
The dedicated technical debt dashboard will present the severity of technical debt.										
The dedicated technical debt dashboard will present the time since a techincal debt item was inserted in a project.										
The dashboard will present the time since an issue was opened.
